

Concrete Scabblers

Thor U-Type Multi-Scabblers

Thor U-Type Scabblers Tools are specifically designed for all types of concrete surface work where it is necessary to carry out surface hammering without in any way causing damage to the basic concrete. Stadium seating, concrete walkways, floors, retaining walls, airport runways, bridges, or similar large areas where it is required to expose the aggregate prior to top coating.

The machines are mounted on wheels for ease of transportation, but while the machines are operating the wheels rise clear of the working surface and the machines virtually float, enabling them to be manipulated with ease in a scything motion. Handle design gives good balance and control, together with conveniently placed "on/off" valve, makes machine operation extremely simple for the operator.
